### **Riding on a Ray of Light** Krishnagopal

Dharani 2020-04-07 A Conceptual Breakthrough in Our Understanding of Fundamental Nature of Matter and Energy!! A lot of questions have bothered science for a long time! What is a photon? Why does light behave both like a particle and a wave? How does light transform into matter? What is gravity? What is Big Bang and what came before it? The list is endless ... Riding on a Ray of Light describes a working model, called the Negentropic Model, which describes the fundamental nature of matter and energy. The negentropic model, formulated as a single theoretical principle based on the current scientific concepts, describes the precise structure of photon along with an explicit mechanism of generation of a light. It also describes the precise nature of matter and its formation in nature along with the intriguing nature of gravity. Alongside, this model explains the underlying meaning of some of the weirdest quantum phenomena such as wave-particle duality. In addition, by proposing the concept of 'dark protons', negentropic model allows us to delineate the precise nature of dark matter and dark energy, and this knowledge lets us peep into the depths of black holes to understand their true nature. Basing on these findings, the concept of Big Bang is revised and a brand-new concept of Differential Big Bang proposed! Riding on a Ray of Light presents the most comprehensive model in fundamental physics

proposed so far, answering many of the hitherto unanswered questions in particle physics and cosmology, which really helps us to work towards a Theory of Everything !

**Foundations of College Chemistry, International Adaptation** Morris Hein 2023-05-16 Foundations of College Chemistry, 16th edition presents chemistry as a modern, vital subject and is designed to make introductory chemistry accessible to all beginning students. It is intended for students who have never taken a chemistry course or those who had a significant interruption in their studies but plan to continue with the general chemistry sequence. The central focus is to make chemistry interesting and understandable and teach students the problem-solving skills they will need. This International Adaptation offers new and updated content with improved presentation of all course material. It builds on the strengths of previous editions, including clear explanations and step-by-step problem solving. The material emphasizes real-world applications of chemistry as the authors develop the principles that form the foundation for the further study of chemistry. There is new and expanded coverage of polarizing power and polarizability - Fajans' rules, collision number and mean free path, abnormal molecular masses and van't Hoff factor, and applications of radioactivity.

The Overview section summarizes the content of the chapter and includes a comprehensive listing of terms, a summary of general concepts, and a list of numerical exercises, while the Topical Outline provides the subtopic heads that carry the corresponding chapter and section numbers as they appear in the textbook. The Fill-in, Multiple Choice are two sets of questions that include every concept and numerical exercise introduced in the chapter and the Skills section provides developed exercises to apply the new concepts in the chapter to particular examples. The Common Mistakes section is designed to help avoid some of the errors that students make in their effort to learn chemistry, while the Practical Test section includes matching and multiple choice questions that comprehensively cover almost every concept and numerical problem in the chapter. After briefly dealing with an overview of chemistry, this book goes on
