*Ethical Design of Artificial Intelligence-based Systems for Decision Making* Valentina Franzoni 2023-11-29 Artificial Intelligence (AI), including Machine Learning with Deep Neural Networks, is making and supporting decisions in ways that increasingly affect humans in many aspects of their lives. Both autonomous and decision-support systems applying AI algorithms and data-driven models are used for decisions about justice, education, physical and psychological health, and to provide or deny access to credit, healthcare, and other essential resources, in all aspects of daily life, in increasingly ubiquitous and sometimes ambiguous ways. Too often these systems are built without considering the human factors associated with their use and the need for clarity about the correct way to use them, and possible biases. Models and systems provide results that are difficult to interpret and are accused of being good or bad, whereas good or bad is only the design of such tools, and the necessary training for them to be properly integrated into human values.

*An Introduction to Object-oriented Design in C++* Jo Ellen Perry 1996  
 Which comes first, learning object-oriented design or programming in C++? The authors present an object-oriented approach at the outset as the best way to learn introductory programming concepts. C++ doesn't have to be the top hierarchical level at the end of a programming journey. The object-oriented features of C++ are used as an appropriate foundation for learning to program.
