Engineering Materials and Metallurgy Mr. R. Prem Kumar
2025-09-05 Engineering Materials and Metallurgy is a comprehensive textbook that explores the fundamental principles, processes, and applications of materials science and metallurgy in engineering. Carefully structured for students, educators, and professionals, this book bridges the gap between theoretical concepts and practical applications, making it a valuable resource for academic study as well as industrial practice. The text begins with the constitution of alloys and phase diagrams, building a foundation for understanding material structures and transformations. It then moves into heat treatment processes, ferrous and non-ferrous alloys, and non-metallic materials such as polymers, ceramics, and composites. The final section delves deeply into mechanical properties, material testing, and failure mechanisms like fatigue, creep, and fracture essential for design and analysis in real-world engineering systems. Each chapter is supported with illustrations, classification charts, process diagrams, and case-based examples, ensuring clarity and retention of key concepts. The book emphasizes both the scientific principles and their engineering implications, highlighting applications in industries such as aerospace, automotive, construction, and manufacturing. Designed primarily for undergraduate students in Mechanical, Metallurgical, Production, and Materials Engineering, this book also serves as a ready reference for researchers, practicing engineers, and industry professionals. By combining depth of coverage with accessibility, it equips readers with the knowledge to select, process, and apply engineering materials effectively in modern technological contexts.

How to Read Signs and Omens in Everyday Life Sarvananda Bluestone

2001-10-01 Discover your psychic powers and learn to use the wonders of nature and the world around you as magical tools of divination. • Practical and enjoyable exercises help readers reconnect with their innate psychic sensitivity. • Includes 75 methods and practices of divination from around the world. Since the beginning of time, diviners and seers have been finding signs and omens in the world around them--in pools of water, tea leaves, delicate patterns of cracked animal bones, and the ripples of clouds in the sky. Because these observers have been able to tap into a deeper level of awareness, they have come to sense hidden truths in powerful and mysterious ways. In modern times we call those who possess these abilities "psychic," but native cultures accepted that each of us has an innate sixth sense and can learn how to read the forces of nature that appear before us. In this fascinating and enlightening guide, historian and psychic Sarvananda Bluestone shows us how our innate knowledge can be rediscovered, allowing us to become far more in tune with our surroundings than we ever dreamed possible. He teaches us to use everyday objects and the wonders of nature as magical tools that offer a window into the future--and ourselves. Whether watching birds cross the morning sky or divining the subtle energies of the earth, you will see the world in an entirely new light. Filled with practical exercises, *How to Read Signs and Omens in Everyday Life* demonstrates how the discovery of the power within ourselves requires nothing more than a little guidance and a willingness to see.

Computational Vision and Bio-Inspired Computing S. Smys 2021-06-14

This book includes selected papers from the 4th International Conference on Computational Vision and Bio Inspired Computing (ICCVBIC 2020), held in Coimbatore, India, from November 19 to 20, 2020. This proceedings book presents state-of-the-art research innovations in computational vision and bio-inspired techniques. The book reveals the theoretical and practical aspects of bio-inspired computing techniques, like machine learning, sensor-based models, evolutionary optimization and big data modeling and management that make use of effectual computing processes in the bio-inspired systems. As such it contributes to the novel research that focuses on developing bio-inspired computing solutions for various domains, such as human-computer interaction, image processing, sensor-based single processing, recommender systems and facial recognition, which play an indispensable part in smart agriculture, smart city, biomedical and business intelligence applications.
