Forest Inventory Annika Kangas 2006-02-19 This book has been developed as a forest inventory textbook for students and could also serve as a handbook for practical foresters. We have set out to keep the mathematics in the book at a fairly non-technical level, and therefore, although we deal with many issues that include highly sophisticated methodology, we try to present first and foremost the ideas behind them. For foresters who need more details, references are given to more advanced scientific papers and books in the fields of statistics and biometrics. Forest inventory books deal mostly with sampling and measurement issues, as found here in section I, but since forest inventories in many countries involve much more than this, we have also included material on forestry applications. Most applications nowadays involve remote sensing technology of some sort, so that section II deals mostly with the use of remote sensing material for this purpose. Section III deals with national inventories carried out in different parts of world, and section IV is an attempt to outline some future possibilities of forest inventory methodologies. The editors, Annika Kangas Professor of Forest Mensuration and Management, Department of Forest Resource Management, University of Helsinki. Matti Maltamo Professor of Forest Mensuration, Faculty of Forestry, University of Joensuu. ACKNOWLEDGEMENTS

Work with Display Units 89 Louis Berlinguet 1990 Most of the articles contained in this volume are concerned with the prevalence of symptoms among VDU operators and the hazards involved with the use of this technology. Many authors suggest useful means of prevention. While recent emphasis has been on problems related to the physical VDU environment, attention is now being focused on the effects of work organization. In the same vein, the field of human-computer interaction has undergone rapid growth. The studies presented will help in the design of software and learning tools and will contribute to the reduction of the mental workload of operators. At the same time, it is important to assess the social consequences of the implementation of VDUs. A number of chapters analyze media communication of research results, and the resulting public debates, and researchers from developing countries describe the difficulties and opportunities associated with technology transfer.
