Applying Digital Technologies to Evaluation Carl W. Lickteig 2001 The Army's growing reliance on digital technologies reinforces and extends concerns about training and evaluation, particularly in the area of command and control. Digital technology represents a new and powerful weapon for attacking evaluation requirements, but is a double-edged sword that poses challenge and opportunity. This report examines how digital technologies can help solve many evaluation challenges, including the ones they create. The Background chapter reviews basic issues confronting conventional command and control performance and evaluation. Two key issues considered are manually burdened methods and measures, and the limitations imposed by analog media. The Findings chapter examines how digital technologies might improve evaluations of command and control performance. This examination begins by identifying many of the new challenges introduced by digital command and control systems. Next, opportunities for overcoming evaluation challenges through the application of digital technologies are considered, including automated measures of versus about performance, more precise and comprehensive measures, and less burdened measurement methods. Finally, examples of digital measurement methods illustrate the potential for improving command and control evaluation through digital data integration, data mining, and data visualization. The report's conclusions identify some key research and development efforts required for applying digital technology to improve command and control performance and evaluation.

Elliott 2018-03-08 The Second Edition of this handbook provides comprehensive coverage of the concept of accessibility and its application to the design and implementation of instruction and tests with all students.
