Marine Education 1991 "This bibliography was first published as a result of a cooperative education effort of the nation's Sea Grant programs and the staff of The Living Seas pavilion presented by United Technologies at EPCOT Center in Orlando, Florida. A compilation of the textbooks, curricula, and other marine education resource materials developed by individual Sea Grant programs, the Marine Education Bibliography has proven useful to a wide range of educators, and demand has far exceeded supply, making necessary this update. Through the efforts of many, the bibliography is again available as a tool for teachers and other individuals interested in helping students explore and understand our oceans and Great Lakes. Entries include ordering instructions and information about materials available free or at cost"--National Sea Grant Library publication website.

Science Curriculum Topic Study Page Keeley 2019-09-11 Today's science standards reflect a new vision of teaching and learning. | How to make this vision happen Scientific literacy for all students requires a deep understanding of the three dimensions of science education: disciplinary content, scientific and engineering practices, and crosscutting concepts. If you actively engage students in using and applying these three dimensions within curricular topics, they will develop a scientifically-based and coherent view of the natural and designed world. The latest edition of this best-seller, newly mapped to the Framework for K-12 Science Education and the Next Generation Science Standards (NGSS), and updated with new standards and research-based resources, will help science educators make the shifts needed to reflect current practices in curriculum, instruction, and assessment. The methodical study process described in this book will help readers intertwine content, practices, and

crosscutting concepts. The book includes: • An increased emphasis on STEM, including topics in science, technology, and engineering • 103 separate curriculum topic study guides, arranged in six categories • Connections to content knowledge, curricular and instructional implications, concepts and specific ideas, research on student learning, K-12 articulation, and assessment Teachers and those who support teachers will appreciate how Curriculum Topic Study helps them reliably analyze and interpret their standards and translate them into classroom practice, thus ensuring that students achieve a deeper understanding of the natural and designed world.
