*Teach Students How to Learn* Sandra Yancy McGuire 2023-07-03 Co-

published with NISOD Miriam, a freshman Calculus student at Louisiana

State University, made 37.5% on her first exam but 83% and 93% on the

next two. Matt, a first year General Chemistry student at the University

of Utah, scored 65% and 55% on his first two exams and 95% on his

third. These are representative of thousands of students who decisively

improved their grades by acting on the advice described in this book.

What is preventing your students from performing according to

expectations? Sandra McGuire offers a simple but profound answer: If

you teach students how to learn and give them simple, straightforward

strategies to use, they can significantly increase their learning and

performance. For over a decade Sandra McGuire has been acclaimed

for her presentations and workshops on metacognition and student

learning because the tools and strategies she shares have enabled faculty

to facilitate dramatic improvements in student learning and success. This

book encapsulates the model and ideas she has developed in the past

fifteen years, ideas that are being adopted by an increasing number of

faculty with considerable effect. The methods she proposes do not

require restructuring courses or an inordinate amount of time to teach.

They can often be accomplished in a single session, transforming

students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning; finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively, and that readers can be flexible in picking and choosing among the strategies she presents, Sandra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with no background in education or cognitive psychology, the book avoids jargon and esoteric theory.
