Directed Energy Weapons Bahman Zohuri
2016-08-29 This book delves deeply into the

real-world technologies behind the 'directed
energy weapons' that many believe exist only
within the confines of science fiction. On the
contrary, directed energy weapons such as high
energy lasers are very real, and this book
provides a crash course in all the physical and
mathematical concepts that make these weapons
a reality. Written to serve both scientists
researching the physical phenomena of laser
effects, as well as engineers focusing on
practical applications, the author provides
worked examples demonstrating issues such as
how to solve for heat diffusion equation for
different boundary and initial conditions. Several
sections are devoted to reviewing and dealing
with solutions of diffusion equations utilizing the
aid of the integral transform techniques.

Ultimately this book examines the state-of-the-
art in currently available high energy laser
technologies, and suggests future directions for
accelerating practical applications in the
field.
