**Walford's Guide to Reference Material: Science and technology** Albert John Walford 1999 A core resource for the identification and evaluation of reference materials, cited in BCL3 and Sheehy. While the majority of items are books, periodical articles, microforms, and online and CD-ROM sources are also represented. This revised and updated volume includes many 1998 publications as possible, together with some items published early in 1999. Some 700 items have been added, bringing the total to 7,594. No schedule is given for publication of volumes 2 and 3, but presumably the complete project will follow three-year cycle established with previous editions.

UHPCC Under Impact and Blast Qin Fang 2021-02-22 This book is about the Ultra-high Performance Cementitious Composites (UHPCC), which is a relatively new type of cementitious materials. UHPCC has very low water-to-binder ratio, high amount of high-range water reducer, fine aggregates and high-strength steel or organic fibers. With the prominent mechanical properties, e.g., high compressive and tensile strength, high ductility, and high fracture energy, UHPCC has been becoming the most prospective construction cement-based material for both civil and military structures to resist high-speed projectile penetration, low-velocity impact and blast loadings. In this book, the related work conducted by authors on the static and dynamic mechanical properties, as well as the impact and blast resistance of UHPCC are presented. This book is written for the researchers, engineers and graduate students in the fields of protective structures and terminal ballistics.
