*The Beilstein Online Database* American Chemical Society. Meeting 1990

The computer-based Beilstein Handbook is the most complete and systematic collection of evaluated data on organic compounds. This book begins with an introduction and overview of the database. It then discusses the development of the database, the implementations of the two operating systems (STN and DIALOG), chemical structure searches, and the physical properties data stored in the handbook. It also describes the Lawson Similarity Number, a valuable new tool for searching for structure similarity.

*Image Processing Using Pulse-Coupled Neural Networks* Thomas

Lindblad 2005-11-28 This is the first book to explain and demonstrate the tremendous ability of Pulse-Coupled Neural Networks (PCNNs) when applied to the field of image processing. PCNNs and their derivatives are biologically inspired models that are powerful tools for extracting texture, segments, and edges from images. As these attributes form the foundations of most image processing tasks, the use of PCNNs facilitates traditional tasks such as recognition, foveation, and image fusion. PCNN technology has also paved the way for new image processing techniques such as object isolation, spiral image fusion, image signatures, and content-based image searches. This volume contains examples of several image processing applications, as well as a review of hardware implementations.
