**Java in Distributed Systems**

Marko Boger 2001-05-25 Large and complex software systems, such as Internet applications, depend on distributed applications. Although Java has helped reduce the complexity of distributed systems, developers still have to contend with diverse hardware platforms, remote communication over networks, and system failures. Java in Distributed Systems provides a comprehensive guide for anyone wishing to deepen their knowledge of Java in distributed applications. Beginning with a tutorial guide to distributed programming in the Java environment, it shows you how building blocks from

threads to Jini can help you to fulfil Sun's vision, that 'the Network is the Computer'. It then goes on to focus on aspects that are still challenging researchers such as concurrency, distribution, and persistence. Key Features:

- One of the few books to focus specifically on Java for building distributed applications - Coverage includes threads & sockets, RMI, CORBA, Voyager, Mobile agents, JDBC, object-oriented databases, Java spaces and Jini - Includes advanced chapters on the cutting edge of Java language development, including the author's own proposed Dejay (Distributed Java), an open-source project that offers a unified approach to concurrency, distribution and persistence

Model Driven Engineering Languages and Systems

Oscar Nierstrasz 2006-11-23 This book constitutes the refereed proceedings of the 9th International Conference on Model Driven Engineering Languages and Systems (formerly UML conferences), MoDELS 2006. The book presents 51 revised full papers and 2 invited papers.

Discussion is organized in topical sections on evaluating UML, MDA in software development, concrete syntax, applying UML to interaction and coordination, aspects, model integration, formal semantics of UML, security, model transformation tools and implementation, and more.

**Quality of Software Architectures Models and Architectures**

Steffen Becker 2008-10-07 Models are used in all kinds of engineering disciplines to abstract from the various details of the modelled entity in order to focus on a specific aspect. Like a blueprint in civil engineering, a software architecture provides an

abstraction from the full software system's complexity. It allows software designers to get an overview on the system underdevelopmentandtoanalyze itsproperties. Inthissense, modelsarethefoundation needed for software development to become a true engineering discipline. Especially when reasoning on a software system's extra-functional properties, its software architecture carries the necessary information for early, design-time analyses. These analyses take the software architecture as input and can be used to direct the design process by allowing a systematic evaluation of different design alternatives. For example, they can be used to cancel out decisions which would lead to architecture - signs whose implementation would not comply with extra-functionalrequirements like performance or reliability constraints. Besides such quality attributes directly visible to the end user, internal quality attributes, e.g., maintainability, also highly

depend on the system's architecture. In addition to the above-mentioned technical aspects of software architecture models, non-technical aspects, especially project management-related activities, require an explicit software architecture model. The models are used as input for cost estimations, time-, deadline-, and resource planning for the development teams. They serve the project management activities of planning, executing, and controlling, which are necessary to deliver high-quality software systems in time and within the budget.

### **Designing Concurrent, Distributed, and Real-time Applications with UML**

Hassan Gomaa 2000 Suitable for real-world systems that deal with complex issues such as concurrency and real-time constraints. Providing detailed guidelines, this book is useful for software engineers.

### Fundamental Approaches to Software Engineering José

Fiadeiro 2008-03-18 This book constitutes the refereed

proceedings of the 11th International Conference on Fundamental Approaches to Software Engineering, FASE 2008, held in Budapest, Hungary, in March/April 2008 as part of ETAPS 2008, the European Joint Conferences on Theory and Practice of Software. The 26 revised full papers presented together with 5 tool demonstrations were carefully reviewed and selected from 119 submissions. The papers are organized in topical sections on requirements and architectures, models and model transformations, conceptual models and UML, service engineering and adaptable services, verification and testing, and objects and components.

### **Principles of Concurrent and Distributed**

**Programming** M. Ben-Ari 2006 Principles of Concurrent and Distributed Programming provides an introduction to concurrent programming focusing on general principles and not on specific systems. Software today is inherently concurrent or distributed -

from event-based GUI designs to operating and real-time systems to Internet applications. This edition is an introduction to concurrency and examines the growing importance of concurrency constructs embedded in programming languages and of formal methods such as model checking.

**Successful Strategies for Debugging Concurrent**

**Software** Scott Douglas Fleming 2009

**Developing Java Software**

Russel Winder 2006-11-28 Beginning with basic ideas, Winder progresses to the process of creating useful object-oriented applications. Along the way, all the core features of Java are covered, including the use of exceptions and multi-threading

**Concurrency** Jeff Magee 2006-06-16 Designed to give students hands-on design and programming experience, this book provides a motivational learning package for a fascinating area of software design.

*Concurrency* Jeff Magee 2006 Concurrency provides a thoroughly updated approach to the basic concepts and techniques behind concurrent programming. Concurrent programming is complex and demands a much more formal approach than sequential programming.

**Research and Advanced Technology for Digital Libraries** 2005

**Communicating Process**

**Architectures** 2007 Alistair A.

McEwan 2007 Deals with Computer Science and models of Concurrency. This title emphasizes on hardware/software co-design and the understanding of concurrency that results from these systems. It includes a range of papers on this topic, from the formal modeling of buses in co-design systems through to software simulation and development environments.

*Integrated Formal Methods*

Eerke Boiten 2004-03-05 The fourth conference in the series of international meetings on Integrated F-

mal Methods,

IFM, was held in Canterbury, UK, 4-7 April 2004. The conference was organized by the Computing Laboratory at the University of Kent, whose main campus is just outside the ancient town of Canterbury, part of the county of Kent. Kent is situated in the southeast of England, and the university sits on a hill overlooking the city of Canterbury and its world-renowned cathedral. The University of Kent was granted its Royal Charter in 1965. Today there are almost 10,000 full-time and part-time students, with over 110 nationalities represented. The IFM meetings have proven to be particularly successful. The first meeting was held in York in 1999, and subsequently we held events in Germany in 2000, and then Finland in 2002. The conferences are held every 18 months or so, and attract a wide range of participants from Europe, the Americas, Asia and Australia. The conference is now firmly part of the formal methods conference calendar. The conference has also evolved in terms of themes and

subjects - presented, and this year, in line with the subject as a whole, we saw more work on verification as some of the challenges in this subject are being met. The work reported at IFM conferences can be seen as part of the attempt to manage complexity by combining paradigms of specification and design, so that the most appropriate design tools are used at different points in the life-cycle.
