Readings in Object-oriented Database Systems Stanley Benjamin Zdonik 1990 Fundamentals of object-oriented databases; Object-oriented fundamentals; Semantic data models and persistent languages; Object-oriented database systems; Implementation; Transaction processing; Special features; Relational extensions and extensible databases; Interfaces; Applications.

Spatial Database Systems Albert K.W. Yeung 2007-05-23 The decision to write this book was motivated by a number of factors. First, although several useful textbooks on spatial databases have recently been published, this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain-specific applications. Second, much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings, and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume. The tasks of sourcing and coherently integrating relevant contributions is daunting for students, many of whom have a substantial number of competing demands placed on them. This book should make the task of knowledge building less daunting. Third, and perhaps most importantly, an apparent trend in many spatial information science programs is to focus, from first or second year undergraduate through to fourth year courses, on learning to work confidently and independently with increasingly complex software tools. Hence, many courses are technical in nature, and while they continue to produce technically adept students, knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates. Some programs have sought to address this by introducing courses that focus on spatial data management. However, these courses are largely unsupported by a relevant and contemporary textbook.

Emerging Perspectives on Translanguaging in Multilingual University Classrooms Vimbai Mbirimi-Hungwe 2020-09-16 This collection highlights research conducted by academics from the fields of science and English language studies. The contributions gathered here bring out the importance of using a translanguaging approach to teaching subject content. The volume responds to the generally agreed custom among academics that translanguaging should only be used by language teachers and lecturers. The practical descriptions of how translanguaging has been, and can be, used in science and maths classrooms show that translanguaging pedagogy should not be a tool to be used by language lecturers only. The volume shows that there are emerging perspectives with regards to teaching maths and science where translanguaging pedagogy can be used as a vehicle towards assisting students to understand difficult academic concepts.
