*Pediatric Critical Care Study Guide* Steven E. Lucking  
2012-04-10 This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references, but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available, but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner

### *The Cardiovascular System*

Alan Noble 2005 A textbook on the cardiovascular system for medical students, offering an integrated coverage of the basic science and major diseases of the system.

Integrated coverage of the structure, function and major diseases of the cardiovascular system - highly suitable for systems courses as taught in the new medical curriculum.

Coverage of the basic science is clinically driven - a common clinical presentation introduces each major topic. Clinical cases are used and explained in the chapter rather than merely being present to provide additional interest. Coverage of major diseases of the cardiovascular system equips students for the contact with patients which now occurs much earlier in the medical course. Attractive, open two colour page design with objectives defined at the start of each chapter and self-assessment at the end.
