Introduction to Criminal Justice Information Systems Ralph Ioimo 2016-02-17 The proliferation of information systems throughout the criminal justice system has prompted many universities supporting criminal justice programs to add criminal justice information systems technology to their curriculums. Several universities have gone so far as to hire professors with specializations in information technology and to offer criminal justice information systems as an area of concentration. *Introduction to Criminal Justice Information Systems* gives an overview of the various software systems and technologies currently used in the criminal justice environment. The book covers a variety of topics critical to each member of the criminal justice system: police, prosecutor, courts, and corrections. It details the current systems in use, how they are used, and how separate systems interact with others. It also suggests how the current technology and the processes built upon it will evolve. While designed as a textbook to meet the needs of an introductory criminal justice information technology course, *Introduction to Criminal Justice Information Systems* is also a flexible resource useful to professionals in relevant areas of the criminal justice system. With rapidly increasing development and use of technology in modern law enforcement, this book provides a much-needed reference for those who are responsible for its implementation as well as an essential introduction to those who will become responsible for it. An instructor's manual is available as an electronic download upon request.

[Targeting Commitment](#) Rodney Scott 2022-03-08 New Zealand's deceptively simple but effective program to improve public services New Zealand has long been considered at the forefront of public administration, experimenting with new ways of organizing and delivering public services. Even so, successive New Zealand governments had mixed results from using traditional public management tools to lift the performance of the public service and address persistent problems that required multi-agency action. In 2012 the government decided to try something different. As part of a reform package called Better Public Services, the government challenged the public service to organize itself around achieving just ten results that had proven resistant to previous interventions. The plan was deceptively simple: set ambitious targets and publicly report on progress every six months; hold small groups of public managers collectively responsible; use lead indicators; and learn from both success and failure. This book explores how and why the New Zealand government made progress and how the program was able to create and sustain the

commitment of public servants and unleash the creativity of public entrepreneurs. The authors combine case studies based on the experience of people involved in the change, together with public management research. They explain how ambitious targets and public accountability were used as levers to overcome the bureaucratic barriers that impeded public service delivery, and how data, evidence, and innovation were used to change practice. New Zealand experimented, failed, succeeded, and learned from the experience over five years. This New Zealand experience demonstrates that interagency performance targets are a potentially powerful tool for fostering better public services and thus improving social outcomes.
