**Science Fact and Science**

**Fiction** Brian Stableford

2006-09-06 Science fiction is a

literary genre based on scientific speculation. Works of science fiction use the ideas

and the vocabulary of all

sciences to create valid

narratives that explore the

future effects of science on

events and human beings.

Science Fact and Science

Fiction examines in one volume

how science has propelled

science-fiction and, to a lesser

extent, how science fiction has

influenced the sciences.

Although coverage will discuss

the science behind the fiction from the Classical Age to the present, focus is naturally on

the 19th century to the

present, when the Industrial

Revolution and spectacular

progress in science and

technology triggered an influx

of science-fiction works

speculating on the future. As

scientific developments alter

expectations for the future, the

literature absorbs, uses, and

adapts such contextual visions.

The goal of the Encyclopedia is

not to present a catalog of

sciences and their application

in literary fiction, but rather to

study the ongoing flow and

counterflow of influences,

including how fictional

representations of science

affect how we view its practice

and disciplines. Although the

main focus is on literature,

other forms of science fiction,

including film and video games,

are explored and, because

science is an international

matter, works from non-English

speaking countries are

discussed as needed.
