Concepts in Biology Eldon D. Enger 2005 Concepts in Biology is a short, student-friendly text organized in a traditional manner. It has very little botany and presents a human-oriented approach to the animal unit. Professors and students appreciate the low cost of this title, and that it is written for students who are not biology majors.

**Authentic School Science** Wolff-Michael Roth 2012-12-06 According to John Dewey, Seymour Papert, Donald Schon, and Allan Collins, school activities, to be authentic, need to share key features with those worlds about which they teach. This book documents learning and teaching in open-inquiry learning environments, designed with the precepts of these educational thinkers in mind. The book is thus a first-hand report of knowing and learning by individuals and groups in complex open-inquiry learning environments in science. As such, it contributes to the emerging literature in this field. Secondly, it exemplifies research methods for studying such complex learning environments. The reader is thus encouraged not only to take the research findings as such, but to reflect on the process of arriving at these findings. Finally, the book is also an example of knowledge constructed by a teacher-researcher, and thus a

model for teacher-researcher activity.

Essentials of Anatomy and Physiology Charles M. Seiger 2006 Designed to help students master the topics and concepts covered in the textbook, the Study Guide includes a variety of review questions, including labeling, concept mapping, and crossword puzzles that promote an understanding of body systems. It is keyed to each chapter's learning objectives and parallels the three-level learning system in the textbook.
