Nuclear Oncology Duccio
Volterrani 2022-10-04 This
book discusses the role of
nuclear medicine in the
diagnosis, staging, and
treatment of patients with
specific cancers. It presents
the incidence, pathophysiologic
and clinical aspects of the
disease, the use of nuclear
imaging in diagnosis, staging
requirements, management of
specific tumors, and
surveillance after primary
treatment of cancers. It
addresses the various
diagnostic/therapeutic options

that are currently available or
are most likely to become
available in the near future
according to a prioritized
approach, thereby keeping to a
minimum the number of
diagnostic imaging procedures
the patient is expected to
undergo. Topics include basic
science, clinical applications,
radionuclide therapy,
radioguided surgery, heart
disease in the cancer patient,
and adverse effects of cancer
therapy. Each clinical chapter
discusses the radionuclide
procedures within an
integrated framework, thereby
identifying the information
required for effective
treatment of specific tumors.
The book concludes with a
series of updated cases that
define and expand the didactic
material in the clinical
application chapters.
Thoroughly updated and
revised, the third edition
incorporates new clinical
evidence validating the use of

radionuclides for diagnosis and therapy in oncology, new radiotracers, and the growing integration of imaging modalities into different types of hybrid imaging. With contributions from a group of internationally distinguished practitioners, *Nuclear Oncology: From Pathophysiology to Clinical Applications*, Third Edition, is a valuable reference for nuclear medicine physicians, radiologists, medical and surgical oncologists, and other clinicians involved in the care and management of cancer patients.

[T]axing Greenhouse Gases
Lex Fullarton 2019-03-30
Lex Fullarton takes a closer look at

the three pillars of the sustainable development framework known as the Triple Bottom Line (TBL). The concept of the TBL is that for a project to be sustainable it must not simply be profitable in economic terms, but it must also benefit society and enhance the natural environment. In the 21st century, the greatest threat to Earth's natural environment and the population of the planet is the rise of greenhouse gas emissions caused from burning fossil fuel as an energy source. The rise of GHG emissions has resulted in a rise in the ambient air temperature of the Earth's atmosphere and is resulting in a significant change in climatic conditions on Earth. Fullarton scrutinizes the problem of getting industry and governments to understand the significance of creating harmony within the TBL. One of the main problems is that partisan politics tends to fragment the factors of the TBL rather than bring them together. Fullarton takes a strong stand in suggesting that

taxation systems, which have traditionally been viewed primarily as a means of raising government finance, can be effectively applied to influence industrial and consumer attitudes towards transiting away from polluting fossil-fuel energy sources towards non-polluting renewable energy use.

sensors; networks; control, energy, renewable energy sources; automotive and biological systems; vehicular networking and connected vehicles; intelligent transport, effectiveness and logistics systems, smart grids, nonlinear systems, power, social and economic systems, education, IoT. The book *New Technologies, Development and Application V* is oriented towards Fourth Industrial Revolution "Industry 4.0", in which implementation will improve many aspects of human life in all segments and lead to changes in business paradigms and production models. Further, new business methods are emerging, transforming production systems, transport, delivery and consumption, which need to be monitored and implemented by every company involved in the global market. Municipal Solid Waste Management in Developing Countries Sunil Kumar 2016-11-18 This book contains detailed and structured approaches to tackling

practical decision-making troubles using economic consideration and analytical methods in Municipal solid waste (MSW) management. Among all other types of environmental burdens, MSW management is still a mammoth task, and the worst part is that a suitable technique to curb the situation in developing countries has still not emerged. *Municipal Solid Waste Management in Developing Countries* will help fill this information gap based on information provided by field professionals. This information will be helpful to improve and manage solid waste systems through the application of modern management techniques. It covers all the fundamental concepts of MSWM; the various component systems, such as collection, transportation, processing, and disposal; and their integration. This book also discusses various component technologies available for the treatment, processing, and disposal of MSW. Written in

view of actual scenarios in developing countries, it provides knowledge to develop solutions for prolonged problems in these nations. It is mainly for undergraduate and postgraduate students, research scholars, professionals, and policy makers.

Proceedings of the 3rd Annual International Conference on Material, Machines and Methods for Sustainable Development (MMMS2022) Banh Tien Long 2024-04-30 This book presents selected, peer-reviewed proceedings of the 3rd International Conference on Material, Machines and Methods for Sustainable Development (MMMS2022), held in the city of Can Tho, Vietnam, from 10 to 13 November 2022. The purpose of the conference is to explore and ensure an understanding of the critical aspects contributing to sustainable development with a focus on advanced mechanical engineering, automation, materials, machines and

methods. The contributions published in this book come from authors representing universities, research institutes and industrial companies and reflect the results of a very broad spectrum of research, from micro- and nanoscale materials design and processing, to mechanical engineering technology in industry. Many of the contributions selected for these proceedings focus on materials modeling, eco-material processes and mechanical manufacturing. Volume 3 of this book focuses on topics dedicated to sustainable approaches in machine design, life cycle engineering, and energy management for manufacturing processes.
