*C and the 8051: Hardware, modular programming, and multitasking* Thomas W. Schultz 1998 Today, everything from cell phones to microwaves to CD players all contain microcontrollers, or miniature computers, which need to be programmed to perform specific tasks. Designing such systems requires an understanding of both microprocessor electronics and programming languages. This book is written for the industrial electronics engineer who needs to use or switch to the Intel 8051 family of microcontrollers and implement it using a C programming language.

**8051 Microcontrollers** D. M. Calcutt 1998 A guide to the 8051 family of microcontrollers with particular focus on how they are used in practical circuits. This volume includes worked

examples and design applications which are designed to enable the reader to fully understand the devices. The material should be accessible to students with an elementary understanding of microprocessors and is aimed at second and third year electronic engineering and computing students, as well as postgraduate students on computer application research courses.

**Integrated Smart Sensors** Gert van der Horn

2012-12-06 1 1. 1 Introduction The (signal processing and storage) capacity of the human brain enables us to become powerful autonomous beings, but only if our brains operate in conjunction with (at least some of) our senses and muscles. Using these organs, we can interact with our environment, learn to adapt, and improve important aspects of our life. Similarly, the signal processing capabilities of modern electronics (computers) could be combined with electronic sensors and actuators to enable interaction with, and adaptation to, the (non-electrical) environment. This will lead to

smarter and more powerful automated tools and machines. To facilitate and stimulate such a development, easy-to-use low-cost sensors are needed. The combination of electronic interface functions and a sensor in an integrated smart sensor, that provides a standard, digital, and bus-compatible output, would simplify the connection of sensors to standard electronic signal processors (microcontrollers, computers, etc.). Currently, the calibration procedure, required for standardization of the sensor output signal level, contributes largely to the production costs of accurate sensors. To enable automation of the calibration procedure, and hence reduce the sensor fabrication costs, a digital calibration junction should be included in the smart sensor. INTEGRATED SMART SENSORS: Design and Calibration Introduction 1. 2 Sensors and actuators In industry many processes are electronically controlled. As depicted in Fig.
