Color Atlas of Zebrafish Histology and Cytology Jinxing Lin 2022-10-21 This book elucidates the tissue structure and cell composition of the organs of zebrafish at the microscopic, ultrastructural and molecular levels. The distribution of important macromolecular substances is shown and the morphological relationship between different components is analyzed. The book is divided into 15 chapters and contains more than 700 structural photos, all of which are original experimental pictures of the research group. It shows the histological panorama of the whole zebrafish both in cross and longitudinal sections and covers and interprets the tissues and organs of zebrafish in detail, including oropharynx, taste buds, pharyngeal teeth, liver, etc. A brief text description of the structure and function meaning is available for every picture to facilitate the audience understanding the theoretical knowledge more vivid and concrete. In addition, the 3D reconstruction of the main organs of zebrafish is completed by computer-aided technology, and the three-dimensional morphology of the organs is displayed in an intuitive form. This book provides a reference for postgraduates and researchers in anatomy, biology, animal medicine, animal science, aquaculture, developmental biology, medicine, and experimental animals.

Human Anatomy and Physiology II Mr. Arpan Kumar Tripathi 2022-11-08 There are few more fundamental concepts or fields of study in the living sciences than anatomy and physiology. Anatomy is the study of the structure and physical connections of the body's internal and exterior parts, whereas physiology is the study of how those parts work. Anatomy and physiology are discussed and summarized, along with their significance to medical applications. The axial and appendicular portions of the human body are the two primary divisions. The cranium, cervical spine, thoracic cavity, abdominal cavity, and pelvis make up the axial portion, while the limbs, both upper and lower, make up the appendicular portion. In addition, we examined cell theory, the most common organic chemicals and other components present in cells, and the role of the plasma membrane in regulating the thickness and inner concentrations of cells. This book covers topics such as Nervous system, Small intestine and large intestine, Anatomy and functions of salivary glands, Respiratory system And Urinary system, Regulation of respiration, Role of RAS in kidney and disorders of kidney, Endocrine system, Mechanism of hormone action, Glands, Reproductive system, Gametogenesis, Introduction to genetics and many more.
