Spectral Analysis of Signals

Yanwei Wang 2022-05-31

Spectral estimation is
important in many fields
including astronomy,
meteorology, seismology,
communications, economics,

speech analysis, medical
imaging, radar, sonar, and
underwater acoustics. Most
existing spectral estimation
algorithms are devised for
uniformly sampled complete-
data sequences. However, the
spectral estimation for data
sequences with missing
samples is also important in
many applications ranging
from astronomical time series
analysis to synthetic aperture
radar imaging with angular
diversity. For spectral
estimation in the missing-data
case, the challenge is how to
extend the existing spectral
estimation techniques to deal
with these missing-data
samples. Recently,
nonparametric adaptive
filtering based techniques have
been developed successfully for
various missing-data problems.
Collectively, these algorithms
provide a comprehensive
toolset for the missing-data
problem based exclusively on
the nonparametric adaptive

filter-bank approaches, which are robust and accurate, and can provide high resolution and low sidelobes. In this book, we present these algorithms for both one-dimensional and two-dimensional spectral estimation problems.
