C & Data Structures: With Lab Manual, 2/e V.V.

Muniswamy 2009-10-17 This book is designed for the way we learn. This text is intended for one year (or two-semester) course in "C Programming and Data Structures". This is a very useful guide for undergraduate and graduate engineering students. Its clear analytic explanations in simple language also make it suitable for study by polytechnic students. Beginners and professionals alike will benefit from the numerous examples and extensive exercises developed to guide readers through each concept. Step-by-step program code clarifies the concept usage and syntax of C language constructs and the underlying logic of their applications. Data structures are treated with algorithms, trace of the procedures and then programs. All data

structures are illustrated with simple examples and diagrams. The concept of "learning by example" has been emphasized throughout the book. Every important feature of the language is illustrated in depth by a complete programming example. Wherever necessary, pictorial descriptions of concepts are included to facilitate better understanding. The common C programs for the C & Data Structures Laboratory practice appended at the end of the book is a new feature of this edition. Exercises are included at the end of each chapter. The exercises are divided in three parts: (i) multiple-choice questions which test the understanding of the fundamentals and are also useful for taking competitive tests, (ii) questions and answers to help the undergraduate students, and (iii) review questions and problems to enhance the

comprehension of the subject. Questions from GATE in Computer Science and Engineering are included to support the students who will be taking GATE examination. DSmT-Based Fusion Strategy for Human Activity Recognition in Body Sensor Networks Yilin Dong Multi-sensor fusion strategies have been widely applied in Human Activity Recognition (HAR) in Body Sensor Networks (BSNs). However, the sensory data collected by BSNs systems are often uncertain or even incomplete. Thus, designing a robust and intelligent sensor fusion strategy is necessary for highquality activity recognition. In this paper, Dezert-Smarandache Theory (DSmT) is used to develop a novel sensor fusion strategy for HAR in BSNs, which can effectively improve the accuracy of recognition. Specifically, in the training stage, the Kernel Density Estimation (KDE) based models are first built and then precisely selected for each specific activity according to

the proposed discriminative functions. ECOOP ... 1987 Biological Investigations Lab Manual Warren Dolphin 2010-01-27 The lead author of eight successful previous editions has brought together a team that combined, has well over 60 years experience in offering beginning biology labs to several thousand students each year at Iowa State University. Their experience and diverse backgrounds ensure that this extensively revised edition will meet the needs of a new generation of students. Designed to be used with all majors-level general biology textbooks, the included labs are investigative, using both discovery- and hypothesis-based science methods. Students experimentally investigate topics, observe structure, use critical thinking skills to predict and test ideas, and engage in hands-on learning. Students are often asked, "what evidence do you have that..." in order to encourage them to think for themselves. By emphasizing

investigative, quantitative, and comparative approaches to the topics, the authors continually emphasize how the biological sciences are integrative, yet unique. An instructor's manual, available through McGraw-Hill Lab Central, provides detailed advice based on the authors' experience on how to prepare materials for each lab, teachings tips and lesson plans, and questions that can be used in quizzes and practical exams.

This manual is an excellent choice for colleges and universities that want their students to experience the breadth of modern biology.
