WHY THIS GUIDE WORKS WHEN OTHERS DON'T

Most study guides give you information. This one gives you a system. The 40/60 learning-to-assessment split means you build knowledge first, then test it relentlessly — because the CPB exam doesn't reward passive reading. It rewards people who can retrieve and apply knowledge under pressure. Every practice question in this guide was written to train exactly that skill. The answer explanations don't just tell you what's right. They tell you why it's right — and why every wrong answer is wrong. That distinction is what turns a practice test into a learning tool rather than just a score.

year 2013 in the subject Health - Public Health, , language: English, abstract: The digitization of radiology affects all areas and departments of service providers in health care and clarifies the changed requirements to historically grown structures, as well as to the dynamic service processes. An implementation of information systems by service providers is a complex task, the complexity of which is increased with integration in teleradiology networks. The relevant influence factors of the digitization of the radiology on patients, processes and economics were examined by theoretical analysis observations and the results were integrated into the implementation method. The developed method for the implementation of information systems in complex overall systems is arranged in a holistic and patient-oriented manner. Information containers form the core of the implementation method. Within the modular information containers all information

relating to one process is set in relationship with each other in a matrix on several levels. From the information containers the individual projects are generated. The implementation method is an instrument of the strategic management, since the technical conception and conversion of information systems require a previous adjustment of structures and processes.
