Mathematical Problems and Puzzles S. Straszewicz 2014-06-28 Popular Lectures in Mathematics, Volume 12: Mathematical Problems and Puzzles: From the Polish Mathematical Olympiads contains sample problems from various fields of mathematics, including arithmetic, algebra, geometry, and trigonometry. The contest for secondary school pupils known as the Mathematical Olympiad has been held in Poland every year since 1949/50. This book is composed of two main parts. Part I considers the problems and solutions about integers, polynomials, algebraic fractions and irrational experience. Part II focuses on the problems of geometry and trigonometric transformation, along with their solutions. The provided solutions aim to extend the student's knowledge of mathematics and train them in mathematical thinking. This book will prove useful to secondary school mathematics teachers and students.

The Hard Mathematical Olympiad Problems and Their Solutions

Steve Dinh 2011 This book shows the approaches to solving many difficult Mathematical Olympiad and other international problems posted at the www.mathlinks.ro, the largest mathematical webpage that has most of the problems used to select the talented students of the world. At the time of this book's publication, the solutions to many of these problems are not yet available. This book is not only as much about methods of solving mathematical problems as it is about various approaches to solving the difficult problems in general. It is a first step in examining the creativity that goes into problem-solving. The real points of the book are the enumeration of problem-solving strategies and the tricks applied to solve the problems. The approaches in the book build understanding and not just methods in solving problems. This book is a must read for many math students and is useful for many teachers around the world.

New Problems and Solutions for International Mathematical

Competitions and Olympiads Pouya Ghofrani 2012-02 The book "New Problems and Solutions for International Mathematical Competitions and Olympiads" provides good experiences for those students who are enthusiastic in thinking and fighting with problems that are famous in the global fields. The problems of the book have been designed ingeniously and selected carefully from thousands of potent problems and notes from many years ago up to now, as to make a basis of important key- problems which contains multiple ideas in ? Number's Theory ? Combinatorics ? Geometry ? Mathematics Analysis ? Complex Numbers Geometry and etc. I have tried to solve them in a clear way such that nearly all the steps have been explained. The problems may first be appeared as related to an obvious class whereas in the solution, lots of joint ideas are essential to solve. The feature which makes this book different from similar books is the fact that I have established a firm structure here which includes almost all dimensions necessary for both university and high school students to direct their acquired ideas and, in the terms of mathematics, to make a complete graph of them.

The Contest Problem Book VIII J. Douglas Faires 2008 For more than 50 years, the Mathematical Association of America has been engaged in the construction and administration of challenging contests for students in American and Canadian high schools. The problems on these contests are constructed in the hope that all high school students interested in

mathematics will have the opportunity to participate in the contests and will find the experience mathematically enriching. These contests are intended for students at all levels, from the average student at a typical school who enjoys mathematics to the very best students at the most special school. In the year 2000, the Mathematical Association of America initiated the American Mathematics Competitions 10 (AMC 10) for students up to grade 10. The Contest Problem Book VIII is the first collection of problems from that competition covering the years 2001-2007. J. Douglas Faires and David Wells were the joint directors of the AMC 10 and AMC 12 during that period, and have assembled this book of problems and solutions. There are 350 problems from the first 14 contests included in this collection. A Problem Index at the back of the book classifies the problems into the following major subject areas: Algebra and Arithmetic, Sequences and Series, Triangle Geometry, Circle Geometry, Quadrilateral Geometry, Polygon Geometry, Counting Coordinate Geometry, Solid Geometry, Discrete Probability, Statistics, Number Theory, and Logic. The major subject areas are then broken down into subcategories for ease of reference. The Problems are cross-referenced when they represent several subject areas.
