HVAC and Building Services Rules of Thumb

Vahid Vakiloroaya 2026-02-10 This comprehensive guide to HVAC design and project management covers all critical aspects of the field, from foundational principles to advanced applications. It introduces the use of rules of thumb in HVAC design, outlines key steps in briefing procedures, and provides a clear framework for addressing design challenges. Readers will learn best practices for managing projects and supervising HVAC installations, as well as how to calculate load components and select appropriate systems and equipment. The book includes practical examples, design principles for air and water distribution systems, and planning

considerations for plant space. It also features checklists for design specifications, installation, and commissioning, an overview of international HVAC standards, and a discussion on the role of software tools in modern HVAC management. This text serves as an essential reference for both newcomers and seasoned professionals in the HVAC industry.

Intelligent Building Systems Albert Ting-pat So 2012-12-06 Intelligent building is the future of our building industry; all commercial, residential, industrial and institutional buildings will be designed towards the goal of 'intelligent buildings'. The most important aspect of an intelligent building is the building systems, such as electrical services, heating, ventilation and air-conditioning systems, vertical transportation systems, and life safety systems, which must

operate intelligently and efficiently to enhance the activities of the occupants. Intelligent Building Systems explains what already exists in a modern intelligent building and describes what is currently being developed by researchers to improve human comfort, working efficiency and energy performance for buildings in the 21st century. Intelligent Building Systems is divided into three parts. The first part gives a quick review of the structure, terminology, layout and operating principles of most standard modern building systems. The second part introduces the background material necessary to understand intelligent building systems, including information on electronics technology, fundamental mathematics, and techniques in artificial intelligence and signal processing. These first two parts are the foundation for the final part, which consists of research works carried out by the authors and other researchers in the application of artificial intelligence to building systems. The technologies presented

will encourage readers to envision new and innovative ideas on possible future applications. Intelligent Building Systems is relevant to practitioners and researchers in the area of architectural science and engineering, electrical and mechanical services and intelligent buildings. It may also be used as a text for advanced courses on the topic.

Transportation Systems in Buildings Chartered Institution of Building Services Engineers 2015
This 5th Edition of CIBSE Guide D is the result of extensive review and revision by a dedicated and enthusiastic team comprising lift and escalator specialists and building service engineers. This Guide is very comprehensive,

covering the whole spectrum of interior circulation, planning and design, selection of equipment and performance, computer programmes, types of systems, legislation, fire and safety, requirements for persons with disabilities, lift components, lift traffic controls, escalators and moving walkways (passenger conveyors), energy consumption, electrical systems and environmental conditions. The purpose of Guide D is to provide guidance to practitioners involved in such systems. The Guide should also be of interest to architects and developers, along with facilities and building managers who may not be directly concerned with the design and installation of lifts and escalators but need to understand the advice offered to them by specialists.

Information Sources in Architecture and

Construction Valerie J. Nurcombe 1996 The new edition (first, 1983) comprises 24 chapters, each written by an expert in the field who describes sources and, in addition, provides instructions in methodology and hints on keeping up with advances in information. Coverage includes architectural history, conservation, contracts and liability.

Walford's Guide to Reference Material:

Science and technology Albert John Walford 1999 A core resource for the identification and evaluation of reference materials, cited in BCL3 and Sheehy. While the majority of items are books, periodical articles, microforms, and online and CD-ROM sources are also represented. This revised and updated volume includes many 1998 publications as possible, together with some items published early in 1999. Some 700 items have been added, bringing the total to 7,594. No schedule is given

for publication of volumes 2 and 3, but presumably the complete project will follow three-year cycle established with previous editions.

Elevator Traffic Handbook Gina Barney
2015-08-27 This second edition of this well-respected book covers all aspects of the traffic design and control of vertical transportation systems in buildings, making it an essential reference for vertical transportation engineers, other members of the design team, and researchers. The book introduces the basic principles of circulation, outlines traffic design methods and examines and analyses traffic control using worked examples and case studies to illustrate key points. The latest analysis techniques are set out, and the book is up-to-date with current technology. A unique and well-

established book, this much-needed new edition features extensive updates to technology and practice, drawing on the latest international research.

People Flow in Buildings Marja-Liisa Siikonen
2021-10-04 Discover how to measure, control, model, and plan people flow within modern buildings with this one-stop resource from a leading professional. People Flow in Buildings delivers a comprehensive and insightful description of people flow, analysis with software-based tools. The book offers readers an up-to-date overview of mathematical optimization methods used in control systems and transportation planning methods used to manage vertical and horizontal transportation. The text offers a starting point for selecting the optimal transportation equipment for new buildings and those being modernized. It

provides insight into making passenger journeys pleasant and smooth, while providing readers with an examination of how modern trends in building usage, like increasingly tall buildings and COVID-19, effect people flow planning in buildings. People Flow in Buildings clearly defines the terms and symbols it includes and then moves on to deal with the measurement, control, modelling, and planning of people flow within buildings of all kinds. Each chapter contains an introduction describing its contents and the background of the subject. Included appendices describe measured passenger data and performed analyses. Readers will also benefit from the inclusion of: A thorough introduction to people-counting methods, including counting technology inside and outside buildings, passenger traffic components, and manual people-counting An examination of the passenger arrival process in building, including the Poisson arrival process and probability density function, and passenger arrivals in

batches A consideration of daily vertical passenger traffic profiles, including two-way traffic profiles and the effects of inter-floor traffic An exploration of people flow solutions, including stairs, escalators, and elevators with collective and destination group control systems, as well as double-deck and multicar system People flow calculation and simulation models Elevator planning with ISO simulation method Elevator planning and evacuation of tall buildings Perfect for software designers in the private sector and academia, People Flow in Buildings will also earn a place in the libraries of elevator consultants, manufacturers, and architects who seek a one-stop reference for transportation devices from a functional and design perspective, as opposed to a hardware perspective.

European Building Construction Illustrated

Francis D. K. Ching 2014-02-10 The first European edition of Francis DK Ching's classic visual guide to the basics of building

construction. For nearly four decades, the US publication *Building Construction Illustrated* has offered an outstanding introduction to the principles of building construction. This new European edition focuses on the construction methods most commonly used in Europe, referring largely to UK Building Regulations overlaid with British and European, while applying Francis DK Ching's clear graphic signature style. It provides a coherent and essential primer, presenting all of the basic concepts underlying building construction and equipping readers with useful guidelines for approaching any new materials or techniques they may encounter. *European Building Construction Illustrated* provides a comprehensive and lucid presentation of everything from foundations and floor systems to finish work. Laying out the material and structural choices available, it provides a full understanding of how these choices affect a building's form and dimensions. Complete with

more than 1000 illustrations, the book moves through each of the key stages of the design process, from site selection to building components, mechanical systems and finishes. *Illustrated* throughout with clear and accurate drawings that effectively communicate construction processes and materials Provides an overview of the mainstream construction methods used in Europe Based around the UK regulatory framework, the book refers to European level regulations where appropriate. References leading environmental assessment methods of BREEAM and LEED, while outlining the Passive House Standard Includes emerging construction methods driven by the sustainability agenda, such as structural insulated panels and insulating concrete formwork Features a chapter dedicated to construction in the Middle East, focusing on the Gulf States
