**Gender and Care with Young Children** B. Denise Hodgins 2019-04-08 This book is an exploration of how children, educators, and things become implicated in gendered caring practices. Drawing on a collaborative research study with early childhood educators and young children, the author examines what an engagement with human-and non-human relationality does to complicate conversations about gender and care. By employing a feminist material analysis of early childhood education, this book rethinks dominant Euro-Western individualist pedagogies in order to reposition them within a relationality framework. The analysis illuminates the political and ethical embeddedness of early childhood education and the understanding that gendering and caring emerge with/in a complex web of many relations.

*Genetics of Complex Disease* Peter Donaldson 2015-08-25 *Genetics of Complex Disease* is a concise text for final year undergraduate and first year graduate students. Healthcare professionals and other biomedical scientists trying to come to grips with the impact of new genetics research will also find the book useful. After explaining genetic variation and defining complex diseases, the text shows how and why complex diseases are investigated. The focus then changes to areas where there is strong evidence for the genes/alleles involved. Important ethical consequences are also covered, as are the methods used to generate new genetic data.
