**How to Localize Marxism in China** Guo Jianing 2022-12-30 This book explores frontier issues concerning the localization of Marxism in China by examining historical processes, cultural implications, and contemporary perspectives on this process of indigenization. Emerging in the 1840s in Germany, Marxism has evolved from a German, European, and Western idea into a Chinese, Asian, and Eastern one. This title seeks to answer the question of how Marxism has been adapted to the Chinese context and how it migrated the regions. The first three chapters chart the history of the dissemination of Marxism to adapt to Chinese conditions across three periods - revolutionary times before 1949, the period of socialist construction after 1949, and the reform and opening-up since 1978. The subsequent two chapters analyze the experience of the development of socialism with Chinese characteristics, featuring synergistic integration with traditional Chinese culture and the combining of the basic principles of Marxism and China's real-life situation. The final chapter advances suggestions on how to further promote the localization of Marxism and how to develop contemporary Chinese Marxism, faced with new historical conditions. The book will appeal to scholars, students, and general readers interested in contemporary Marxism, Marxism in China, and contemporary Chinese history, politics, and society.

Molecular Applications in Cytology Fernando C. Schmitt 2018-07-24 This book is intended for practicing pathologists and cytopathologists, as well as for pathology trainees and cytotechnicians. It starts with a detailed description of the extremely important pre-analytical phase for molecular testing followed by a presentation of the key tests and their application in different organs, e.g. the lung or thyroid. Step-by-step instructions for the different assays, reporting and clinical integration of the test results are discussed. The authors help the reader to benefit from their experiences by providing a valuable tool for the implementation of these techniques in daily practice. Though the use of molecular techniques is well established in surgical biopsies, to date they are not widely used in connection with cytological material. However, in some fields like lung cancer or aspirates from the pancreas and biliary tract the only available material for diagnosis is the cytological preparation a fact that has created a need for the standardization of molecular techniques on cytology.
