It is a conceptually based book that stresses meaningful learning over rote memorization. More specifically, the text focuses on the relationships between business events and financial statements. The primary objective is for students to develop and explain how a particular business event can affect the income statement, balance sheet, and the cash flow statement. Did the event cause assets to increase, decrease, or stay the same? Similarly, what was its effect on liabilities, equity, revenue, expense, gains, losses, net income, and dividends? Furthermore, how did the event affect cash flow? These are the big picture relationships that both accounting majors and general business students need to understand to function effectively in the business world. The text contains numerous innovative features that are designed to facilitate the students' comprehension of the events affecting financial statements.

Solving Principles of Accounting Problems Using Excel for Windows 2005 This text helps students hit the road with a practical set of tools, and the confidence they need to use those tools effectively in making business decisions. The goal is to introduce a new Principles of Accounting text that better reflects a more conceptual and decision-making approach to the material. The authors have taken a new "macro-to micro-" approach to the Principles of Accounting course by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle (although the Accounting Cycle is thoroughly covered in Chapters 3 and 4). The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. They motivate students by grounding the discussion in the real world, showing them the relevance of the topics covered to their future career.
