**Readers' Guide to Periodical Literature** 1916 Author and subject index to a selected list of periodicals not included in the Readers' guide, and to composite books.

**Exchange System Administration** Janice Rice Howd 1999 New Riders books target the distinct needs of the computer professional by providing detailed and solution-oriented information on core technologies. We begin by partnering with authors who have unique depth of experience and the ability to speak to the needs of the practicing professional. Each book is then carefully reviewed at all stages to ensure it covers the most essential subjects in substantial depth, with great accuracy, and with ease of use in mind. These reviews ensure not only that the material is technically sound, but also that it consistently provides information and advice you can really use. The book you hold was built for you, the practitioner, with accurate information and trustworthy advice, at the right depth, at an attractive value. We have taken the knowledge of the author and the real-world experience of our peer reviewers and packaged it in a format that's easy to read, easy to reference, and easy to use. Book jacket.

**Cisco Router Configuration and Troubleshooting** Mark Tripod 2000 For courses in Cisco Technology, Cisco Guides and Certification, Routing and Switching, and Network Management. Cisco Router Configuration & Troubleshooting, Second Edition serves as a reference for students

studying network and system administration. If your course tackles how to configure and maintain existing Cisco routers as well as get new hardware up and running, add this book to your reading list. The author begins by touching on the foundation behind routing technology: networks, protocols, and hardware. Then he jumps right into router configuration, discussing setup, local and wide area networking, security, and monitoring. By providing advice and preferred practices, instead of just rehashing Cisco documentation, Tripod gives students information they can start using today. The troubleshooting section uses a fictitious company to illustrate the different scenarios an administrator might encounter. It includes situations that deal with Cisco routers, as well as hardware from other companies, mimicking the heterogeneous environment most administrators face.
