

Basic Programming Principles 3rd Edition

Programming Bjarne Stroustrup 2024-04-10 An Introduction to Programming by the Inventor of C++ Programming: Principles and Practice Using C++, Third Edition, will help anyone who is willing to work hard learn the fundamental principles of programming and develop the practical skills needed for programming in the real world. Previous editions have been used successfully by many thousands of students. This revised and updated edition Assumes that your aim is to eventually write programs that are good enough for others to use and maintain Focuses on fundamental concepts and techniques, rather than on obscure language-technical details Is an introduction to programming in general, including procedural, object-oriented, and generic programming,

rather than just an introduction to a programming language Covers both contemporary high-level techniques and the lower-level techniques needed for efficient use of hardware Will give you a solid foundation for writing useful, correct, type-safe, maintainable, and efficient code Is primarily designed for people who have never programmed before, but even seasoned programmers have found previous editions useful as an introduction to more effective concepts and techniques Covers a wide range of essential concepts, design and programming techniques, language features, and libraries Uses contemporary C++ (C++20 and C++23) Covers the design and use of both built-in types and user-defined types, complete with input, output, computation, and simple graphics/GUI Offers an introduction to the C++

Educational Robotics in the Makers Era

Dimitris Alimisis 2017-03-13 This book includes
papers presented at the International
Conference “Educational Robotics 2016
(EDUROBOTICS)”, Athens, November 25, 2016.
The papers build on constructivist and
constructionist pedagogy and cover a variety of
topics, including teacher education, design of

educational robotics activities, didactical
models, assessment methods, theater robotics,
programming & making electronics with
Snap4Arduino, the Duckietown project, robotics
driven by tangible programming, Lego
Mindstorms combined with App Inventor, the
Orbital Education Platform, Anthropomorphic
Robots and Human Meaning Makers in
Education, and more. It provides researchers
interested in educational robotics with the latest
advances in the field with a focus on science,
technology, engineering, arts and mathematics
(STEAM) education. At the same time it offers
teachers and educators from primary to
secondary and tertiary education insights into
how educational robotics can trigger the
development of technological interest and 21st
century skills in STEAM education (creative
thinking, team working, problem solving).
