Teaching for Intelligence Barbara Z. Presseisen 2008 "A wonderful collection that addresses issues important in today's classrooms. This is an invaluable tool for any educator willing to strive for personal, student, and schoolwide excellence."--Gayla LeMay, Social Studies Teacher Louise Radloff Middle School, Duluth, GA "Presseisen has skillfully assembled an exceptionally fine collection of articles."--Burt Saxon, Adjunct Professor Yale University and Southern Connecticut State University A vast world of thought, inquiry, and wisdom for educating all learners. This remarkable collection features an interview with Howard Gardner and includes contributions from such luminaries as Robert J. Sternberg, Robert R. Spillane, Arthur L. Costa, Linda Darling-Hammond, Dorothy Strickland, Joseph S. Renzulli, and Joyce VanTassel-Baska. The insightful articles encourage educators to examine their perspectives about the nature of

intelligence, standardized testing, and curriculum requirements. Readers will be able to evaluate critical questions such as: What does teaching for intelligence mean? Who is the intelligent learner? What do educators and scientists have to say about teaching for intelligence? Updated with current research, this thought-provoking resource looks closely at current classroom instructional practice, students' intellectual development, and how educators view students in the learning process.

Writing and Learning in the Science

Classroom Carolyn S. Wallace 2004-05-19 This volume is of interest to science educators, graduate students, and classroom teachers. The book will also be an important addition to any scholarly library focusing on science education, science literacy, and writing. This book is unique in that it synthesizes the research of the three leading researchers in the field of writing to learn science: Carolyn S. Wallace, Brian Hand, and Vaughan Prain. It includes a comprehensive review of salient literature in the field, detailed reports of the authors' own research studies, and current and future issues on writing in science. The book is the first to definitely answer the question, "Does writing improve science learning?". Further, it provides evidence for some of the mechanisms through which learning occurs. It combines both theory and practice in a unique way. Although primarily a tool for research, classroom teachers will also find many practical suggestions for using writing in the science classroom.
