Using rules, patterns and memory tools similar to those used in language arts, Math Phonics (tm) is great for introducing concepts or providing alternative techniques. **Math Mammoth Subtraction 1** Maria Miller 2024-04-06 Math Mammoth Subtraction 1 is a worktext that covers the concept of subtraction, the relationship between addition and subtraction, and the various meanings of subtraction. In the first lesson, Subtraction Is Taking Away, the child learns the basic meaning of subtraction as taking away objects, and learns to write subtractions from an illustration where some objects are crossed out. In the next lesson, the child counts down to subtract, which ties in subtraction with the number line. This is a transitional strategy to solve subtraction

problems, because later students will learn more efficient ways to subtract, but it is important conceptually. The following lesson, Subtraction and Addition in the Same Picture, begins the study of the relationship between addition and subtraction. This concept will span several lessons. This first lesson presents two sets of objects, such as blue and white balls, and the student writes both an addition sentence and a subtraction sentence from this illustration. The lesson When Can You Subtract? concentrates on the idea that some subtractions, such as $4 - 5$, are meaningless when you think of taking away. The child also makes subtraction patterns in this lesson. Then we continue studying the connection between addition and subtraction in the lesson Two Subtractions from One Addition. As an example, the child writes both $8 - 3 = 5$ and $8 - 5 = 3$ from the addition $3 + 5 = 8$. This idea ties in with fact families, a concept that is coming up soon. In the lesson Two Parts - One Total, we study word problems that do not

involve the idea of taking away but have two parts making up a total. For example, if there are 10 flowers of which some are white and some are red, and seven of them are white, how many are red? Then we study fact families, which means writing two additions and two subtractions using the same three numbers. In the lesson How Many More? students find how many more or how many fewer objects one person has than the other by drawing the objects. This lesson can easily be done with manipulatives if desired. In the very next lesson, "How Many More" Problems and Differences, we continue the theme, this time writing a missing addend addition for problems that ask "how many more." For example, Veronica has 4 marbles and Ann has 6. We write the missing addend sentence $4 + \underline{\quad} = 6$ to find how many more Ann has. In the next lesson the child then learns to write subtraction sentences for such problems.

Teaching Mathematics Conceptually Beth L.

MacDonald 2023-04-08 This book expands upon the guiding principles at the heart of Math Recovery® instruction, exploring their connections with learning theory, practical application in the classroom and their wider links to agreed concepts of high-quality mathematics teaching. It provides a well-rounded overview of all major aspects of mathematics teaching including inquiry-based and constructivist approaches, planning and assessment, and strategies that offer children opportunities for reflection, satisfaction and increasing challenge. Particular focus is placed on equitable and inclusive practices in mathematics and how we can develop teaching that connects with the abilities, cultures, and lived experiences of all children. This is essential reading for all teachers familiar with the Math Recovery® approach and classroom mathematics teachers in elementary and primary schools everywhere seeking to enhance their own professional knowledge and

understanding. Beth L. MacDonald is an associate professor in Early Childhood Mathematics Education in the School of Teaching and Learning at Illinois State University. Jonathan N. Thomas is an associate professor of mathematics education and the chairperson of the Department of STEM Education at the University of Kentucky.

Making Math Accessible to Students With Special Needs (Grades K2) r4Educated Solutions 2011-12-30 The purpose of Making Math Accessible to Students With Special Needs is to support everyone involved in mathematics education to become confident and competent with mathematics instruction and assessment so that 99% of students will be able to access

enrolled grade-level mathematics. This resource actively engages readers through reflections and tasks in each chapter and can be used as a self-study professional development or as a group book study. Sample answers to tasks and reflections are found in the appendix, along with additional supports. Making Math Accessible to Students With Special Needs is designed for all teachers involved with mathematics instruction and is a unique resource for alternatively certified teachers and adjunct professionals.

Target Math Success Subtraction of Larger

Numbers Hope Taylor 2004-03-01 Whether you're looking to build essential math skills for an entire class or provide additional help for a few students, look to the Target Math Success series to help you hit your mark. From easy to more advanced, each book contains multiple opportunities for practice on each specific math skill. Once you determine a skill need, it only takes a minute to target an appropriate practice page that features fun, engaging practice

problems. Easy-to-use checkup sheets let you assess a student's progress, and you'll enjoy having parent communications, a student progress chart, and awards all in one resource. **Addition and Subtraction** Natalie 2018-09-18 Addition and Subtraction Workbook Grade 1 is one of the key stages in your children's education as the groundwork begins during this time - they are curious and eager to learn new things, so solidifying a strong mathematical foundation is comparatively easier. This addition and subtraction (grade 1) workbook is exactly what you need! - This additional and subtraction guide ensures that your child understands and develops key skills - let them understand basic elements of math that will prove to be useful during higher education. - This workbook imparts math in a more fun and enjoyable way as the layout is friendly and appealing - it is a lot less boring and stressful for kids, so you don't have to coax them to practice regularly. - This addition & subtraction workbook contains the

clear instructions and step-by step examples for fast learning - it is essentially a comprehensive and progressive set of learning objectives created to help students succeed in math. - The addition and subtraction workbook is structured in learning sequence, with skills introduced in one lesson being built on those taught in previous lessons, thus ensuring the student can progress gradually without taking on excess pressure. - Writing in workbook pages, as opposed to typing on a computer, can help kids focus and learn. Writing by hand fires up specific areas of a child's brain, improving the ability to both remember what they learn and to think of new ideas. They boost your child's confidence from an early age as well. Let your kids learn math in school and practice in this maths workbook (addition and subtraction) at home - a balance can thus be achieved. You can ask them to complete a lesson and set a time, in order to keep an eye on speed. So what are you waiting for? Order without further delay!

Interventions in Mathematics Tierney Kennedy 2016-03-10 Addition and Subtraction consistently prove difficult for students to understand. This intervention program has been designed as a targeted approach to catch kids up on multiple years of addition and subtraction concepts that ideally should have been developed in early primary school, but which I have found are often missing for students in middle and upper primary school. Inside you will find diagnostic tasks to uncover misconceptions that are holding kids back from understanding as well as lessons with unique confrontational questions to fix misconceptions for good. These lessons will show you how to lead kids to abandon their wrong ideas and figure out how addition and subtraction work for themselves so that they really understand them and don't forget what we are teaching.
