Handbook of Medicinal Chemistry Andrew Davis 2015-07-07 Drug discovery is a constantly developing and expanding area of research. Developed to provide a comprehensive guide, the Handbook of Medicinal Chemistry covers the past, present and future of the entire drug development process. Highlighting the recent successes and failures in drug discovery, the book helps readers to understand the factors governing modern drug discovery from the initial concept through to a marketed medicine. With chapters covering a wide range of topics from drug discovery processes and optimization, development of synthetic routes, pharmaceutical properties and computational biology, the handbook aims to enable medicinal chemists to apply their academic understanding to every aspect of drug discovery. Each chapter includes expert advice to not only provide a rigorous understanding of the principles being discussed, but to provide useful hints and tips gained from within the pharmaceutical industry. This expertise, combined with project case studies, highlighting and discussing all areas of successful projects, make this an essential handbook for all those involved in pharmaceutical development.

**Leading Complex Projects** Kaye Remington 2016-04-22 Leadership in projects has been under-represented in many of the most influential project methodologies, where the focus has been on management and process. The importance to project success of key roles such as project board member, executive sponsor, project manager, client representative or team leader, increases exponentially with the scale and complexity of the project. Kaye Remington's Leading Complex Projects draws on original, empirical research into successful leadership of complex projects, including 70 in-depth interviews with people, across a broad range of industries, selected for their roles in guiding complex projects towards successful outcomes. The book, structured around the major

themes from the interviews, explains and applies emerging best-practice in a coherent and focused way. A potent combination of wisdom from leaders in practice and the latest knowledge from many fields of research will engage experienced practitioners, as well as those who are teaching and researching projects, complexity and leadership.
