Concepts in Biology Eldon D. Enger 2005 *Concepts in Biology* is a short, student-friendly text organized in a traditional manner. It has very little botany and presents a human-oriented approach to the animal unit. Professors and students appreciate the low cost of this title, and that it is written for students who are not biology majors.

As a result, this book carefully and methodically develops the most important concepts underlying the functions of the heart, lungs, and circulation (ie, the cardiopulmonary system) and demonstrates the integrated nature of the entire system. By taking this approach, medical students will find this text helpful not only in understanding the most important elements of cardiopulmonary physiology but also in providing a useful review of the heart, lungs, and circulation in preparation for Step 1 of the USMLE.
