Data Integrity and Data Governance Robert D McDowall 2018-11-06 Data integrity is the hottest topic in the pharmaceutical industry. Global regulatory agencies have issued guidance, after guidance after guidance in the past few years, most of which does not offer practical advice on how to implement policies, procedures and processes to ensure integrity.

These guidances state what but not how.

Additionally, key stages of analysis that impact data integrity are omitted entirely. The aim of this book is to provide practical and detailed help on how to implement data integrity and data governance for regulated analytical laboratories working in or for the pharmaceutical industry. It provides clarification of the regulatory issues and trends, and gives practical methods for meeting regulatory requirements and guidance. Using a data integrity model as a basis, the principles of data integrity and data governance are expanded into practical steps for regulated laboratories to implement. The author uses case study examples to illustrate his points and provides instructions for applying the principles of data integrity and data governance to individual laboratory needs. This book is a useful reference for analytical chemists and scientists, management and senior management working in regulated laboratories requiring either an understanding about data

integrity or help in implementing practical solutions. Consultants will also benefit from the practical guidance provided.

Environmental Management Systems 2006

This project was developed with two primary objectives: (1) to identify potential benefits to drinking water utilities from an environmental management system (EMS) and (2) to define steps necessary to develop a water utility sector-specific EMS model from which utilities could create their own EMS. This report reflects both the initial research into alternative EMS models and a "best practices" guidance based on the ISO 14001 framework. With the input of leading private and public water utilities, this document was developed to assist water utilities interested in developing an EMS that will support and ensure continual improvement, increase thoroughness in compliance efforts, and demonstrate environmental excellence.
